

RECOMMENDED USAGE RESTRICTIONS FOR PLANT PROTECTION PRODUCTS ON SOUTHERN AFRICAN EXPORT CITRUS

March 2015

The purpose of these restrictions is to ensure compliance with residue tolerances in the countries to which Southern African citrus is exported. The recommendations on container labels are based on the **current registrations** of plant protection products. In terms of the SA Act 36 of 1947 (and equivalent legislation in neighbouring countries) the registration requirements must be adhered to at all times. However, the requirements of importing countries have made it necessary to introduce **further restrictions** in order to comply with maximum residue limits.

The active ingredients of the products are listed alphabetically together with an illustrative brand name. In the case of commodity products which may be sold under different brand names only a single name is shown for convenience. This does not imply endorsement of the particular brand concerned.

Due to the multiple fruit set pattern of lemons, plant protection products may only be used as specified during the first spring **blossoming and fruit set** period. Special caution should be exercised to ensure that pesticides applied to protect later sets do not result in unacceptable residues in fruit remaining on the trees from earlier sets.

The following general statements are applicable to the use of plant protection products on all cultivars:

- * Growers should ensure that these restrictions are kept handy and are consulted before the application of plant protection products.
- * The application in accordance with current label requirements will in many instances not ensure that export requirements will be met. The restrictions specified are applicable in addition to the label requirements.
- * The withholding periods specified on product labels provide an indication of the ability of treatments to conform to South African residue levels. Since overseas requirements are generally more stringent these withholding periods are not adequate unless specifically mentioned in this document.
- * These restrictions apply to the period during which fruit is present on trees (between blossom and harvest) and not to the period between harvest and the onset of blossom, during which time standard label requirements apply.
- * All usages apply to normal blossom situations. Under conditions where blossoming occurs over an extended period a more conservative approach must be adopted. Under these conditions treatments should be timed according to the early portion of the blossom.
- * Particular attention must be given to ensuring that spray machinery is calibrated to apply the correct spray volumes in relation to tree size and that spray operators are trained in the handling and application of plant protection products.
- * All treatments referred to above must be applied at the registered concentrations.
- * Alternation of products, where applicable with reference to the restrictions, will reduce the risk of excessive residues of any one chemical and will also reduce selection pressure for resistance.
- * The additional restrictions in this document do not necessarily provide an indication of the compatibility of the products with integrated pest management and good agricultural practice.
- * The addition of oil to a treatment, if not registered as such, should be avoided as this may increase the residue level.

All exporting growers should keep accurate spray records so that in the event of exceeding MRLs the reasons can be determined. These records should be retained in safe-keeping for at least 3 years.

Growers are strongly urged to abide by these restrictions to minimise the risk of residue tolerances being exceeded. However, it must be noted that no absolute guarantee can be given that even by following these guidelines export residue tolerances will in all instances not be exceeded. The efficacy and integrated pest management compatibility of plant protection products listed here are additional considerations that users should bear in mind and which are not covered in this document whatsoever. This document has been compiled with information presently available and in good faith, but with the express condition that the authors, Citrus Research International and Citrus Growers Association of Southern Africa, accept no responsibility whatsoever for any loss or damage resulting directly or indirectly from the use thereof.

Alphabetical Superscripts:

- a = CODEX (A): See Regions and Country Groupings Table below.
- b = CODEX (B): See Regions and Country Groupings Table below.
- c = USA has a MRL on citrus for Alpha- Cypermethrin (10mg/kg) and Zeta-Cypermethrin (0.35mg/kg) but none for Cypermethrin, which means only Alpha and Zeta-Cypermethrin formulations are suitable for the USA. WTO notification NUSA2698A1 indicates the USA proposes to reduce the Alpha-Cypermethrin MRL for citrus to 0.35mg/kg.
- d = Reference to “Citrus Fruits” in Taiwan MRL legislation should be interpreted as “oranges only” but “Citrus” refers to all citrus types.
- e = US Environmental Protection Agency has proposed revoking all citrus tolerances for the nematocide Aldicarb within the next 6 months.
- f = Proposed changes due to take effect some time in 2013 (WTO notification NJPN310)
- g = Norway has a new Chlorantraniliprole (Rynaxypyr) MRL of 0.01mg/kg. A PHI of not later than 90% petal fall applies.
- h = From 30th April 2012 all Endosulfan uses in South Africa will be prohibited by the Registrar of Act 36 of 1947
- i = The EU has notified of the potential amendment in the Iprodione MRL for citrus. The proposed implementation date for these changes is the December 2014.
- j = Switzerland has a Cyhexatin MRL of 0.01mg/kg.
- k = Pending decision by Japanese authorities regarding the use of disinfectants.
- L = See CRI Production Guideline for appropriate application techniques.
- m = South Africa does not have access to South Korea for soft citrus currently but the MRL information is included here in anticipation of such access in future.
- n = Awaiting confirmation of the RSA MRL from Department of Health
- o = The Guazatine Codex MRL has been in place for a number of years.
- p = Japan notified (G/SPS/N/JPN/398) on the 26th February 2015 intentions to change the Japanese MRL that will come into effect during 2015.
- q = The EU are currently reviewing the Chlorpyrifos MRL in light of new recommended ADI parameters by EFSA. The Standing Committee are discussing lowering all Chlorpyrifos MRLs that will become applicable in 2015.
- r = Sulfoxaflor has usage authorization but the 0.3mg/kg MRL must still be granted by Department of Health.
- s = Japan have introduced a 0.3mg/kg MRL for imidacloprid on Satsuma’s (easy peelers)
- u = Aldicarb SA registration has been withdrawn and all Aldicarb uses in SA must cease by 31st May 2012.
- v = Japan have notified via WTO G/SPS/N/JPN/390 intention to reduce the Chlorantraniliprole MRL on citrus to 0.5mg/kg to come into effect during 2015 sometime.
- x = A 10.0mg/kg citrus Azoxystrobin MRL has been proposed although the effective date was not notified (see WTO notice G/SPS/N/TPKM/247).
- y = Pay special attention to the introductory notes on page one (3rd paragraph) dealing with on lemons.
